Pronašli smo način kako izdvojiti e-mail adrese iz pronađenih arhivskih poruka <u>(vidi</u> <u>prethodni članak)</u> [1]. Cilj nam je povratak adresara u *Outlook 2007*. Poslije uspješnog izdvajanja adresa u imenike, u 2 posebna popisa (*TO* i *FROM*) treba podatke preoblikovati u format kompatibilan za prebacivanje u *MS Outlook 2007*. Nalazimo da je to *Comma Separated Values* (CSV) *Standard File Format* koji je pogodan za *import*.

Iz kartice Address Book putem Tools --> Export... --> spremimo imenike u .csv zapis.

U MS Outlooku uzemo imenik putem File --> Import and Export... --> Import from another program or file --> Comma Separated Values (Windows) i označimo naš .csv.

Import a File

File to import: C:\Users\user\Documents\FROM.csv Browse Options Options Replace duplicates with items imported Allow duplicates to be created Do not import duplicate items
< Back Next > Cancel

Slijedi bitan korak bez kojeg bismo se vrtili u krug bez pomaka. Kod uvoza treba "mapirati polja". Ako to ne napravite nakon uvoza imate samo *Full name* bez e-mail adrese, to jest neupotrebljiv imenik. Potrebno je na koraku *Import*, odabrati *Map Custom Fields ...*

Import a File
The following actions will be performed:
✓ Import "FROM.csv" into folder: Contacts Map Custom Fields Change Destination
This may take a few minutes and cannot be canceled.
< Back Finish Cancel

Da bi pojednostavili situaciju kod uvoza, odabiremo parametre *Display name* i *e-mail*. Ostale komponente nas ne zanimaju.

Na slici vidimo da su nam *Display name* i *Name* u odgovarajućoj vezi.

×

Map Custom Fields

Drag the values from the source file on the left, and drop them on the appropriate destination field on the right. Drag the item from the right to the left to remove it from the field mapping.

rom: comma Separated Values (Windows) ROM.csv		To: Microsoft Office Outlook Contacts	
Value	^	Field Mapped from	^
First Name		🕀 Name 🥕 Display Name	
Last Name	_	Company	
Display Name		Department Department	
Nickname		Job Title Job Title	
Primary Email		Business Address	
Secondary Email		Home Address Home Address	
Screen Name	×		¥
< >		< >	
< Previous Next >		Clear Map Default Ma	P

Potražimo na desnoj strani podatak o email adresi. Nije nam jednoznačno povezan.

×

Map Custom Fields

Drag the values from the source file on the left, and drop them on the appropriate destination field on the right. Drag the item from the right to the left to remove it from the field mapping.

From: Comma Separated Values (Windows) FROM.csv	To: Microsoft Office Outlook Contacts
Value Primary Email Secondary Email Screen Name Work Phone Home Phone Fax Number Pager Number	Field Mapped from Children Directory Server Directory Server E-mail E-mail E-mail Address E-mail Type E-mail Display E-mail Display E-mail 2
< Previous Next >	Clear Map Default Map
	OK Cancel

Drag and Drop tehnikom s lijeva na desno dovucimo Primary mail kao E-mail Address .

×

Map Custom Fields

Drag the values from the source file on the left, and drop them on the appropriate destination field on the right. Drag the item from the right to the left to remove it from the field mapping.

From: Comma Separated Values (Windows) FROM.csv		To: Microsoft Office Outloo Contacts	k	
Value Primary Email Secondary Email Screen Name Work Phone Home Phone Fax Number Pager Number	^ 	Field Children Directory Server E-mail E-mail Address E-mail Type E-mail Display E-mail 2	Mapped from Primary Email	< >
< <pre> <pre></pre></pre>	>	< Clear Map OK	> Default Ma Cancel	ap

Potvrdimo *OK* i sa *Finish* završimo uvoz imenika - adresara.Oba zapisa *TO.csv* i *FROM.csv* završavaju u "istom košu".

Napokon imamo funkcionalan imenik koji u cjelini možemo prebaciti korisniku u njegov *MS Outlook* 2007. Ponovni izvoz-uvoz unutar *MS Outlooka* ne zahtijeva više "mapiranje polja". Nakon što smo uvezli imenik u *.csv* obliku dobiven na našem testnom računalu, dočekao nas je "hladan tuš". Korisnik se žali da mu adresar opet ne radi ?! Otvaramo mu adresar i pokazujemo unešene adrese. On uzvraća da mu to ništa ne koristi jer mu ne radi *autocomplete* kad unese prvo slovo u *To->* polje?! Tako smo shvatili "kvaku 22" korisnikovog viđenja adresara: on zapravo nije imao adresar koji je održavao i unosio u njega adrese, već mu je to nudio sam *Outlook* iz **Autocomplete List**. Na kraju smo pronašli uzrok "nestanka adresara". U postavkama *Outlooka* automatski je uključena opcija koja stvara "para-imenik" na lokaciji *<drive:>:\Documents and*

Settings\<UserName>\AppData\Roaming\Microsoft\Outlook\Outlook.NK2. Zapravo smo došli u zabludu oko toga koji adresar korisnik želi. Imenik u *.pst* datotekama je bio prazan, korisnikovi e-mailovi su ostali u Outlook.NK2 datoteci na sad već formatiranom disku. Da smo prije "znali" što korisnik želi, mogli smo mu adresar, pod uvjetom da nije bio zahvaćen Ransomware zarazom izvući pomoću NK2Edit [2].

Otkrili smo zašto je imenik iz .pst "nestao"; zato jer je zapravo bio prazan :). Sam *Microsoft* je dosta "lutao" kroz razne verzije *MS Outlooka* kako i gdje sprema "kontakt liste". Treba pročitati upute o <u>migraciji</u> [3] gdje se točno vide promjene kroz verzije. Sigurno se više informacija može naći u Microsoftovoj dokumentaciji.

U međuvremenu, dok smo tražili uzrok nestanka adresara, sjetili smo se kako bi mogli korisniku u *Outlooku 2007* opet generirati "odjednom" *Outlook.NK2* uz onaj "pravi" koji smo uvezli *.csv* datotekom u *.pst* datoteku. Otvorite "New message" iz *MS Outlook 2007* pomoću *To...* polja dohvatite cijeli adresar i iznačite, "poplavite" popis. Potvrdite sa *OK*.

Navedenim ste koracima ponovo stvorili "para-adresar" Outlook.NK2.

Tako smo zaključili ovu peripetiju potrage za "izgubljenim" e-mail adresama. Pomoću metode pokušaja-pogrešaka i intuicije uspjelo nam je rekonstruirati korisnikovu radnu okolinu koja nam u startu nije bila baš najjasnija. Ponešto smo u tom procesu naučilli o tome kako funkcionira popularni Microsoftov e-mail klijent.
